

**IN THE CLAIMS:**

**Kindly replace the claims of record with the following full set of claims:**

1. (Currently amended) A device comprising:

an ambiguous first data input system configured to associate a first user input with a plurality of potential data;

a second data input system receiving a second user input, said second user input being unassociated with the received first user input; and,

a processing unit coupled to the first and second input systems;

receiving said plurality of potential data and said second user input substantially simultaneously,

associating through use of a configurable look-up table each of the plurality of potential data with respective individual data; and

selecting one of the plurality of potential data based on the second user input, wherein the first data input system comprises a manual input device, and the second data input system is a speech recognition input system, a handwriting input system or a stylus input system.

2. (Previously presented) The device of Claim 1, further comprising:

a display coupled to the processing unit and configured to display the selected potential data.

3. (cancelled)

4. (Previously presented) The device of Claim 1, herein the first data input system comprises a touch sensitive screen.

5. (cancelled)

6. (Previously presented) The device of Claim 1, wherein the processing unit further determines the selected data based on a dictionary database internally or remotely accessed.

7. (Currently amended) A software application, comprising instructions, [[which when]] loaded into a processing unit ~~causes the processing unit~~ to perform the following steps:

associating a first user input provided by a user through a first ambiguous input system with a plurality of potential data;

receiving substantially simultaneously with said plurality of potential data, a second user input through a second data input system, said second user input being unassociated with the first user input;

associating through use of a configurable look-up table each of the plurality of potential data with respective individual data;

processing the plurality of potential data and the second user input to select one of the plurality of potential data based on the second user input data,

wherein the first data input system comprises a manual input device, and the second data input system is a speech recognition input system, a handwriting input system or a stylus input system.

8 (Original) The device of Claim 1, wherein the first data input system comprises a real or virtual keyboard configured to associate a specific keystroke with a plurality of graphical characters.

9. (Original) The application of Claim 7, wherein the first data input system comprises a real or virtual keyboard configured to associate a specific keystroke with a plurality of graphical characters.
